## DETAILED ACTION

### *Remarks*

1. Claims 1-5, 7, 11 and 13-33 are pending in the application.
2. The indication of allowable subject matter to claim 19 is withdrawn.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 19, 20 and 22-25 is rejected under 35 U.S.C. 102(e) as being anticipated by Lowrey et al. (US 2003/0001242).

The applied reference has a common assignee with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention “by another,” or by an appropriate showing under 37 CFR 1.131.

In re claims 19 and 22, Lowrey et al., in Fig. 12 and related text, teach forming an interfacial layer 214 comprising a polysilicon (paragraph [0047]), which inherently composed of three dimensional grains since polysilicon is polycrystalline grains, and forming a phase-change

material 404 (i.e. programmable material comprising  $\text{GeSb}_2\text{Te}_5$ , paragraph [0051]) over the interfacial layer 214.

In re claims 20 and 23, Lowrey et al also teach forming the interfacial layer 214 over an insulator or dielectric material 210.

In re claim 24, Lowrey et al further teach forming an opening 220 through the interfacial layer 214 and the dielectric material 210 (Fig.9).

In re claim 25, Lowrey et al further teach forming the phase-change material 404 over the interfacial layer 214 and in the opening 220 (Fig.12).

***Allowable Subject Matter***

5. Claims 1-5, 7, 11, 13-18 and 26-33 are allowed.

6. Claim 21 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

7. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record neither teaches nor suggests that the adhesion layer comprising hemispheric grain polysilicon (claim 1); the adhesion layer having a rough surface (claim 11); and the adhesion layer having bumps of at least 30 Angstroms (claims 26 and 29).
